Election/Restrictions

1. Based on applicant's response filed on January 22nd, 2007, further restriction has been requested.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group 1 claim(s) 1 – 25, drawn to Supervisory Control, which is classified to 700/09.

Group 2 claim(s) 37, drawn to having preparation (editing/modifying), which is classified to 700/86 (87).

The inventions are distinct, each from the other because of the following reasons:

Inventions Group 1 and Group 2 are directed to related control system. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed,

Group 1 is claiming a system, wherein a first level controller controlling a second level controller, which would response to the commands sending from the first level controller.

Group 2 is claiming a method of controlling a system including receiving inputs, then converting the received inputs into which is readable by the second level controller.

Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

2. Inventions Group 1 and Group 2 are related as products, which share a disclosed common utility linked to a substantial structural feature. The products in this relationship are distinct if

Art Unit: 2121

either or both of the following can be shown: (1) that the products encompass embodiments that are NOT required to perform the common utility or (2) that the products as claimed encompass embodiments that are NOT required to have the substantial structural feature. In this case, group 2 requires a feature to convert the command to another format.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
